

# Access VM from Host Machine

- Configure your Jenkins server (jenkins-ubuntu18.04) to access it from host machine
- `sudo apt update && sudo apt install openssh-server`

# Access VM from Host Machine

- Configure your Application server (Appserver-Ubuntu-18.04) to access it from host machine
- `sudo apt update && sudo apt install openssh-server`

again choose the networking as bridge adapter, so that you dont need to modify at `/etc/networks/interfaces` and able to get separate ip's each for jenkins server and application server

# AppServer VM :
